

How to make paper Kalanit flowers

What you will need:

- Red paper or tissue paper
- Scissors
- Black button with at least 2 holes large enough for a pipe cleaner to fit through
- Green pipe cleaner

Instructions:

- Take the red paper/tissue paper and cut out circles (3-5) measuring about 2.5 inches in diameter. These are your petals.
- Collect all the petals and place them together
- Take the green pipe cleaner (your stem) and push it through one side of the collected petals, leaving about 1/3 of the pipe cleaner on that side
- Place the black button in the center of the top side of the petals, where the smaller end of the stem is sticking out
- Weave the stem through the back of the button through one hole and back again through the front using a different hole
- Push the excess stem through the petals and twist the excess around the rest of the stem so the button is secure.
- If need be, gently pull the stem with button attached down a bit until the button is touching the petals
